

The best way to clean and maintain a balcony recently waterproofed with **KEMPEROL**.

1

CLEANING UPON COMPLETION OF CONSTRUCTION WORK OR INITIAL CLEANING

When initially cleaning, first remove any coarse or fine dirt with a broom and vacuum cleaner. Then wet-clean the surface using a solvent-free cleaning agent.

2

INITIAL TREATMENT

To facilitate regular maintenance cleaning, neutralise the surface with water and then initially treat the floor surface with a care product.

3

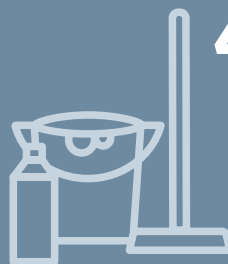

DRY AND WET CLEANING

Dry and wet cleaning at regular intervals and taking into account the degree of soiling help maintain the visual appearance.

TECHNICAL HOTLINE

Do you need technical advice? Call our application engineers directly. We actively support you in your projects.

4

INTENSIVE CLEANING

The local, intensive treatment of the floor with a pH-neutral cleaning agent after wiping helps to remove stains and firmly adhering impurities.
