

KEMPERDUR® TC

The universal coating system

KEMPERDUR® TC is a multi-component, solvent-free, polyurethane-based coating system. This liquid, self-levelling material is suitable for use as a long-lasting protective wearing coating on all interior and exterior surfaces.

The surface is ready to walk on after just four hours and can be designed according to the field of application by strewing in different mineral aggregates e. g. KEMPERDUR® Colour Quartz or KEMPERDUR® Granite or by applying a decorative coating e. g. KEMPERDUR® Deko or solvent-free Deko 2K.

Parking decks, driveways, inner courtyards and ramps are just as ideal for this treatment as are balconies, terraces and covered walkways. And because the multifunctional KEMPERDUR® TC does not contain any solvents it is especially recommended for interior surfaces in halls, basements or retail premises.
